Dwayne,

We had our call with Colonial attorneys. We agreed that since the site/field activities may continue for some extended period, I would send an email outlining what EPA wants them to do and request they provide a response committing to actions. Below is my email. I have not received a response as of today. We did provide the Funds ctr contact you provided to Colonial as they indicated they may have follow up questions more appropriately answered by Fund Ctr. Thanks

Subject: Nashville Airport Pipeline Incident E19413

Mr. Glaze,

As discussed during the response, the unfortunate circumstances of the spill have resulted in an extended period of a discharge, or threat of discharge, to the surface water (McCrory creek). Although EPA is no longer actively monitoring the mitigation efforts in the field, EPA request that Colonial continue the following activities to address the discharge or threat of discharge to the water.

Maintain sufficient boom and containment measures in the creek to contain and collect any oil discharge
Recover and properly dispose of fuel from trenches, pits, sumps, etc.. to prevent oil discharge to the waterway

These activities should continue until there is no longer a discharge to the surface water.

Please confirm Colonials willingness to continue these actions. I you have any questions, please feel free to contact me at 731 394-8996.
